<b>Preliminary Findings</b>				
<p>This report relates to a match following searching against the National DNA Database.</p> <p>The crime scene DNA profile (barcode 8#####) obtained from exhibit DJS5 (blue 'Nike' baseball cap) relating to An address, England/Wales has generated a match to the DNA profile held on the National DNA Database under the name of A. Suspect, DOB 01/01/1999 (barcode 3#####).</p> <p><b>PLEASE NOTE:</b> In this case, the crime scene DNA profile is partial (i.e. incomplete). This often occurs when the crime scene sample is deficient in either quantity or quality of DNA and, as a result, it is only possible to carry out a comparison with A. Suspect's DNA profile, at those corresponding areas of the DNA profile that have produced a result. The crime scene DNA profile that has been loaded to the National DNA Database contains insufficient information to be able to assess the statistical significance of the match at this stage.</p> <p>If required, a direct comparison can be carried out between the crime scene and subject DNA profile, by the Forensic Service Provider. This will provide more information about the evidential significance of this match.</p>				
<b>Evidence Type Supporting / Technical Information</b> Technical information, including issues that may affect the interpretation of DNA evidence, such as mixed profiles and discordance, is available from FSPs, CPS, and the National DNA Database documentation websites.				
<b>To the Investigator</b> This Forensic Information Report is provided to the investigator and contains information based on a forensic assessment or examination of the crime scene and/or exhibit(s). It can be used to support decisions on lines of enquiry. If further forensic assessment or examination is required, the investigator should contact the relevant Force Forensic Department in accordance with standard force operating procedures.
